The serious threat from the outbreak of severe acute respiratory syndrome (SARS) on tourism in Hong Kong is highly significant, not only for local Hong Kong citizens, but also for the many overseas tourists coming to Hong Kong. Although Hong Kong's prevention and control measures were assessed to be effective in containing the epidemic, the scale of the impact on tourism to Hong Kong remains uncertain. This study examined how the perceived seriousness of the threat from SARS on tourism in Hong Kong was related to different stages of the spread of SARS in Hong Kong, as well as to respondents' demographic background and expectations of the public health effect of the SARS outbreak. The results suggest that the public's perception of the threat on tourism from the SARS outbreak was strongly linked to the number of new infections. The more serious the threat, the more people were likely to cancel their travel plans to Hong Kong. The results also suggest that most of the respondents expected a major impact of the SARS outbreak on Hong Kong's tourism sector. They were also more likely to express concerns about their personal safety when they visited Hong Kong during the SARS outbreak. If you'd like to participate in the event, go here to register.
